DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 44-72 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Nowhere in the original disclosure is there a support for (1) **a single substrate body defined by an upper surface and formed with at least one cavity ... and a primary optical path for accommodating the passage of a light beam aligned in a predetermined orientation with the upper cavity** (claims 44, 56, 59, 63, 66 and 70, lines 2-5) and (2) a lower cavity formed on the lower surface of the substrate body (claim 56, line 6). Figs. 2-3 of the instant invention clearly show (i) a primary optical path 13 disposed separately from a surface of a single substrate body 11, i.e. plate 12 and silicon nitride layer 47 are disposed between the surface of the single substrate body 11 and the primary optical path 13, and (ii) a spacer 14 which is not a part of the **single** substrate body 11; therefore, Figs 2-3 do not support for features (1) and (2).
